

EP. 1 THE CONCEPT

IS THAT A TRIKE?

Could we actually
build and
homologate this?

EVERY HOMOLOGATION
STORY HAS
A BEGINNING

SMALL. LIGHT. FUN. HYDROGEN.

Meet XR 01

3 wheels, 2 seats in tandem, 480 kg, 45 kW, hydrogen, 350 bar.

*AI GENERATED VISUAL

CAR OR MOTORCYCLE?

Three legal identities

*AI GENERATED VISUAL

EU: L5e tricycle.

UK: own approval.

US: autocycle, self-certified.

THE PAPERWORK

What it would take

6

approval cases

2 variants × EU, UK, US

3

test vehicles

each one needed in several tests

1

fixed date

EU launch, October 2027

For a concept that only exists on paper.

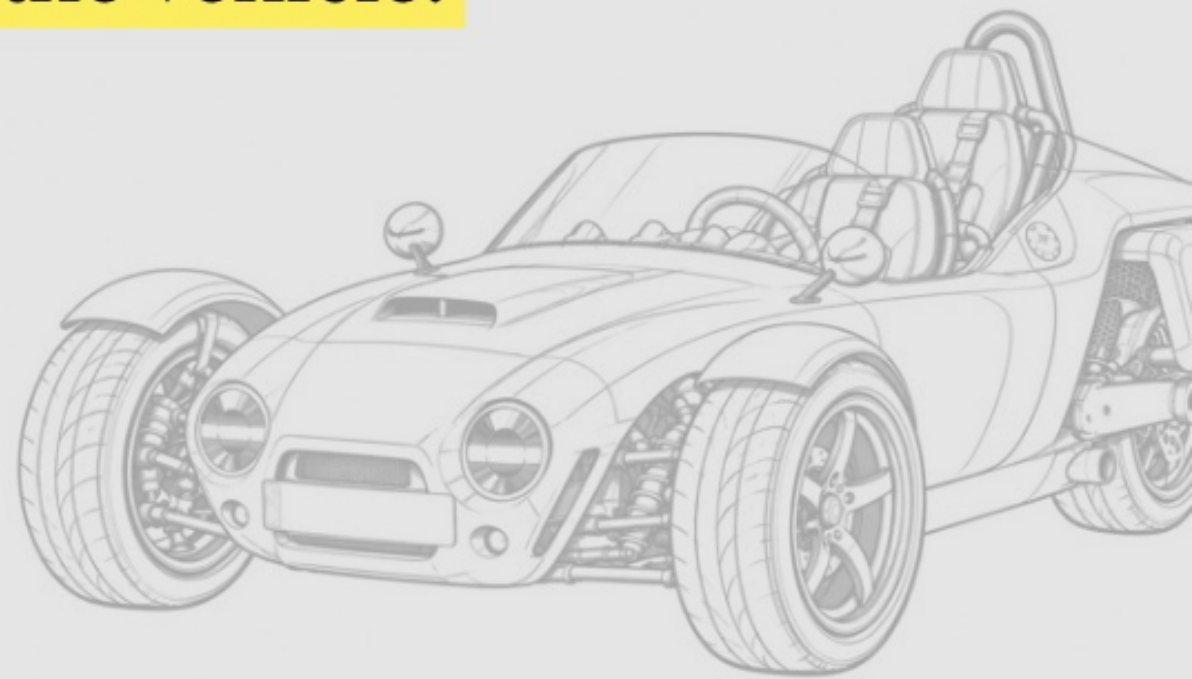

*SYNTHETIC PROGRAMME

THE HONEST ANSWER

XR 01 will never hit the road.

It doesn't have to. We invented it for one reason: to show what it really takes to get a vehicle approved in three markets.

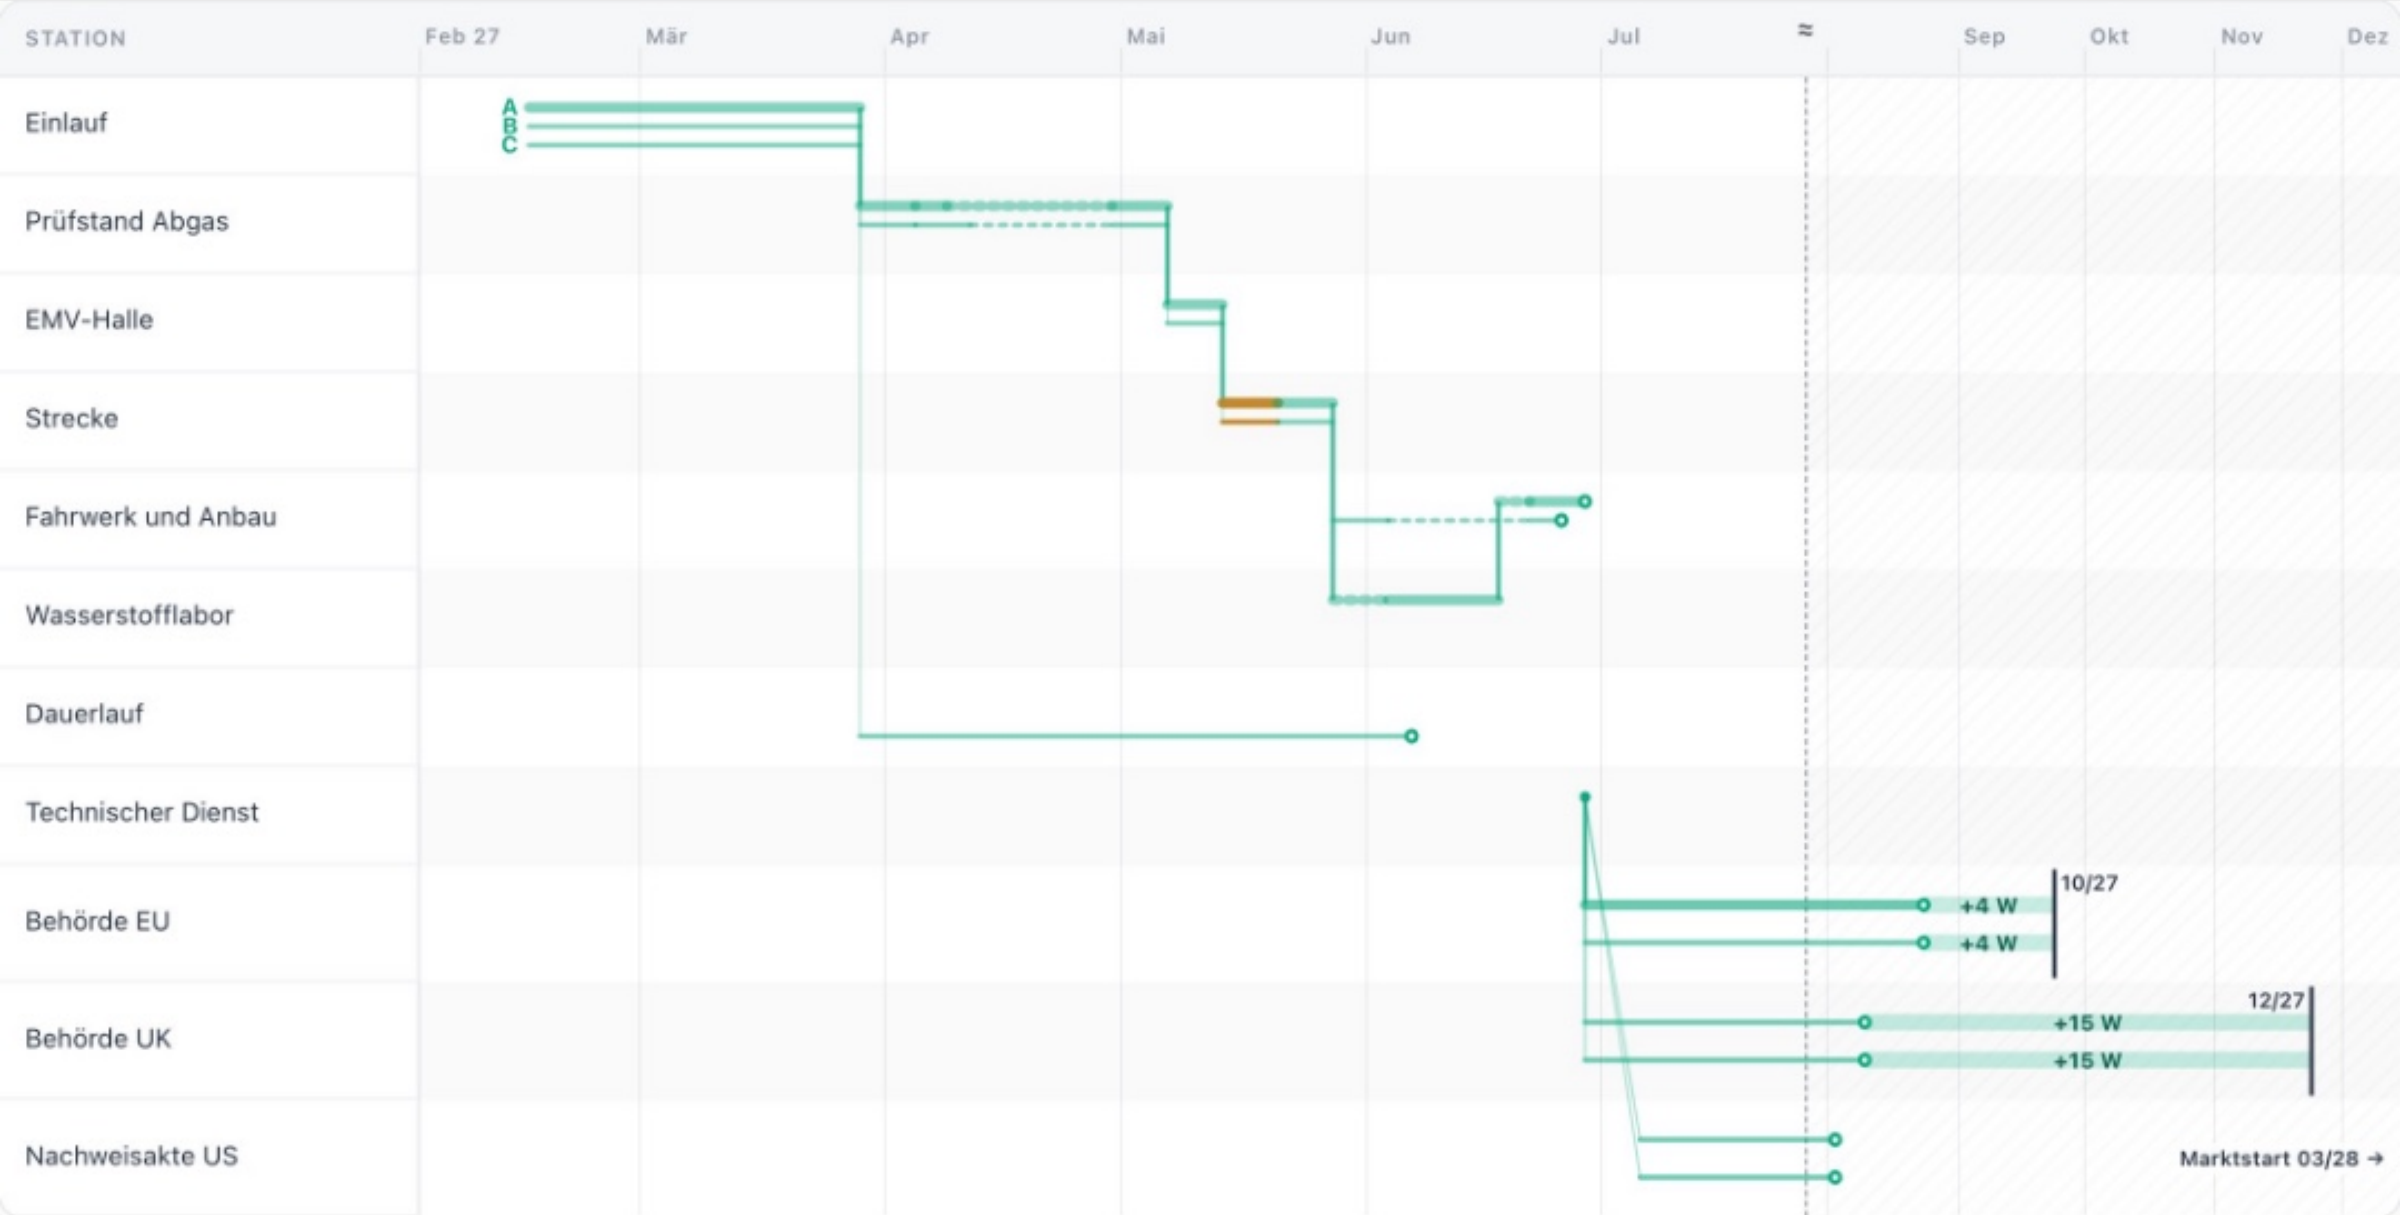

The hard part was never the vehicle.
It's the plan.

THE PLAN

Meet XORPunkt

We planned XR 01’s complete homologation in XORPunkt: every test, every test vehicle, every date.

The EU launch holds. With 4 weeks to spare.

*SYNTHETIC DATA

HOW IT THINKS

Who does what

Rules

calculate

every date, every buffer, every test

AI

proposes

reads changes, flags what matters

Engineers

decide

every decision kept in the history

AI never changes the data.

SEE IT LIVE

16–17 November

Veranstaltungsforum Fürstenfeld, Fürstenfeldbruck

TÜV SÜD Fachtagung Homologation: XR 01's full plan, live.

Next episode: a software update hits XR 01. 38 changes. Which one moves the launch?
